Pitfall in diagnosis and management of

Acute Coronary Syndrome: Case-based learning

สุพจน์ ศรีมหาโชคตะ

สารบัญ

Chulalongkorn Fast Track for ST elevation myocardial infarction	1
Case 1: Anterior wall myocardial infarction with hyperacute T wave – delay diagnosis	15
Case 2: Anterior wall myocardial infarction – reciprocal change in inferior leads	23
Case 3: Posterior wall myocardial infarction post Streptokinase	27
Case 4: Hyperacute T wave mimic hyperkalemia	41
Case 5: Left main occlusion with ST-segment depression	46
Case 6: ST-segment elevation myocardial infarction with new left bundle branch block	51
Case 7: ST-segment elevation myocardial infarction with previous left bundle branch block	59
Case 8: Left bundle branch block and heart failure	66
Case 9: Anterior wall myocardial infarction – ST-segment depression in inferior leads	70
Case 10: Anterior wall myocardial infarction - delay diagnosis	78
Case 11: Posterior wall myocardial infarction with rupture papillary muscle	91
Case 12: Tako tsubo mimic anterior wall myocardial infarction	101
Case 13: Myocarditis mimic anterior wall myocardial infarction	110
Case 14: New left bundle branch block in the young patient	117

Case 15: Aortic dissecting presented as acute coronary syndrome	123
Case 16: Anterior wall myocardial infarction with right bundle branch block	130
Case 17: Acute pulmonary emboli mimic inferior wall myocardial infarction	136
Case 18: Hyperthyroidism or acute myocardial infarction	142
Case 19: Inferior wall myocardial infarction with large amount of clot	150
Case 20: Inferior wall myocardial infarction with rupture free wall	156
Case 21: Acute coronary syndrome and fraction flow reserve	167
Case 22: Coronary spasm presented with ST-segment elevation myocardial infarction	179
Case 23: Non-steroidal inflammatory agent drug induced coronary spasm	184
Case 24: Anterior wall myocardial infarction in the young	189
Case 25: Acute myocardial infarction with cyanosis	194
Case 26: Inferior wall myocardial infarction and aortic dissection	204
Case 27: Amphetamine induced ST-segment elevation	213
Case 28: Mitral stenosis and acute myocardial infarction	221
Case 29: Accelerated idioventricular rhythm post Streptokinase	228
Case 30: Misdiagnosis of posterior wall myocardial infarction	234
Case 31: Posterior wall myocardial infarction with right bundle branch block	243
Case 32: Tako tsubo with coronary artery disease	256

Case 33: ST-segment elevation mimic hyperkalemia	264
Case 34: Sepsis with ST-segment elevation myocardial infarction	271
Case 35: Inferior wall myocardial infarction versus septic shock	279
Case 36: Inferior wall myocardial infarction with heart block	286
Case 37: Acute myocardial infarction without pain but vessel still close	295
Case 38: Reperfusion with T wave inversion	304
Case 39: Post cardiac arrest should go to Cath Lab	311
Case 40: Hyperacute T wave – misdiagnosis	318
Case 41: ST-segment elevation after EKG follow-up	324
Case 42: Posterior wall myocardial infarction with early repolarization of anterior leads	329
Case 43: Post anesthetic induction T wave change	337
Case 44: Unstable angina and then.....	343
Case 45: Hyperacute T wave – missing again	358
Case 46: Inferior wall myocardial infarction with abnormal systolic murmur	363
Case 47: Low risk unstable angina with CTA	372
Case 48: Cocain induced ST elevation	379
Case 49: Posterior wall myocardial infarction with ST elevation V7 – V9	384
Case 50: Pericarditis	390
