Preface v

UNIT 1 LEVELS OF ORGANIZATION

1 An Introduction to Anatomy and Physiology 1

- ▶ An Introduction to Studying the Human Body 2
- 1-1) Anatomy and physiology directly affect your life 2
- 1-2) Good study strategies are crucial for success 2
- 1-3) Anatomy is structure, and physiology is function 4
- 1-4) Anatomy and physiology are closely integrated 5
 - Anatomy 5
 - Physiology 7
- 1-5) Levels of organization progress from molecules to a complete organism 7
- 1-6) Homeostasis is the tendency toward internal balance 10
- 1-7) Negative feedback opposes variations from normal, whereas positive feedback exaggerates them 12
 - The Role of Negative Feedback in Homeostasis 12
 - The Role of Positive Feedback in Homeostasis 12
 - Systems Integration, Equilibrium, and Homeostasis 13
- 1-8) Anatomical terms describe body regions, anatomical positions and directions, and body sections 15
 - Superficial Anatomy 15
 - Sectional Anatomy 17
- 1-9) Body cavities protect internal organs and allow them to change shape 20
 - The Thoracic Cavity 20
 - The Abdominopelvic Cavity 22

Chapter Review 23

Clinical Notes

- The Visible Human Project 6
- Homeostasis and Disease 12

Spotlight

- Levels of Organization 8

2

The Chemical Level of Organization 26

- ▶ An Introduction to the Chemical Level of Organization 27
- 2-1) Atoms are the basic particles of matter 27
 - Atomic Structure 27
 - Elements and Isotopes 28
 - Atomic Weights 28
 - Electrons and Energy Levels 29
- 2-2) Chemical bonds are forces formed by atom interactions 30
 - Ionic Bonds 30
 - Covalent Bonds 31
 - Hydrogen Bonds 33
 - States of Matter 33
 - Molecular Weights 34
- 2-3) Decomposition, synthesis, and exchange reactions are important chemical reactions in physiology 34
 - Basic Energy Concepts 34
 - Types of Chemical Reactions 36
- 2-4) Enzymes catalyze specific biochemical reactions by lowering a reaction's activation energy 37
- 2-5) Inorganic compounds lack carbon, and organic compounds contain carbon 38
- 2-6) Physiological systems depend on water 38
 - The Properties of Aqueous Solutions 39
 - Colloids and Suspensions 40
- 2-7) Body fluid pH is vital for homeostasis 40
- 2-8) Acids, bases, and salts are inorganic compounds with important physiological roles 41
 - Salts 42
 - Buffers and pH Control 42
- 2-9) Carbohydrates contain carbon, hydrogen, and oxygen in a 1:2:1 ratio 42
 - Monosaccharides 43
 - Disaccharides and Polysaccharides 44
- 2-10) Lipids contain a carbon-to-hydrogen ratio of 1:2 45
 - Fatty Acids 45
 - Eicosanoids 46
 - Glycerides 46
 - Steroids 48
 - Phospholipids and Glycolipids 48

2-11 Proteins are formed from amino acids and contain carbon, hydrogen, oxygen, and nitrogen 50

Protein Structure 50

Protein Shape 50

Enzyme Function 51

Glycoproteins and Proteoglycans 54

2-12 DNA and RNA are nucleic acids 54

Structure of Nucleic Acids 54

RNA and DNA 55

2-13 ATP is a high-energy compound used by cells 56**2-14** Chemicals form functional units called cells 57**Chapter Review** 58**Clinical Notes**

Solute Concentrations 40

Fatty Acids and Health 46

Spotlight

Chemical Notation 35

3 The Cellular Level of Organization 62

3-1 An Introduction to Cells 63**3-1** The plasma membrane separates the cell from its surrounding environment and performs various functions 63

Membrane Lipids 63

Membrane Proteins 66

Membrane Carbohydrates 67

3-2 Organelles within the cytoplasm perform particular functions 68

The Cytosol 68

The Organelles 68

3-3 The nucleus contains DNA and enzymes essential for controlling cellular activities 78

Contents of the Nucleus 79

Information Storage in the Nucleus 80

3-4 DNA controls protein synthesis, cell structure, and cell function 81

The Role of Gene Activation in Protein Synthesis 81

The Transcription of mRNA 81

Translation 82

How the Nucleus Controls Cell Structure and Function 84

3-5 Diffusion is a passive transport mechanism that assists membrane passage 85

Diffusion 86

Diffusion across Plasma Membranes 87

3-6 Carrier-mediated and vesicular transport mechanisms assist membrane passage 90

Carrier-Mediated Transport 90

Vesicular Transport 92

3-7 The transmembrane potential results from the unequal distribution of ions across the plasma membrane 96**3-8** Stages of a cell's life cycle include interphase, mitosis, and cytokinesis 96

DNA Replication 96

Interphase, Mitosis, and Cytokinesis 97

The Mitotic Rate and Energy Use 100

3-9 Several growth factors affect the cell life cycle 100**3-10** Tumors and cancers are characterized by abnormal cell growth and division 101**3-11** Differentiation is cellular specialization as a result of gene activation or repression 102**Chapter Review** 103**Clinical Notes**

Inheritable Mitochondrial Disorders 77

DNA Fingerprinting 80

Mutations 83

Drugs and the Plasma Membrane 87

Telomerase, Aging, and Cancer 102

Parkinson's Disease 103

Spotlights

Anatomy of a Model Cell 64

Protein Synthesis 74

Stages of a Cell's Life Cycle 98

4 The Tissue Level of Organization 108

4 An Introduction to the Tissue Level of Organization 109**4-1** The four tissue types are epithelial, connective, muscle, and neural 109**4-2** Epithelial tissue covers body surfaces, lines cavities and tubular structures, and serves essential functions 109

Functions of Epithelial Tissue 110

Specializations of Epithelial Cells 110

Maintaining the Integrity of Epithelia 111

4-3 Cell shape and number of layers determine the classification of epithelia 113

Classification of Epithelia 113

Glandular Epithelia 115

4-4 Connective tissue provides a protective structural framework for other tissue types 120

Classification of Connective Tissues 121

Connective Tissue Proper 121

4-5 Cartilage and bone provide a strong supporting framework 127

Cartilage 127

Bone 130

- 4-6) **Tissue membranes are physical barriers of four types: mucous, serous, cutaneous, and synovial** 131
 Mucous Membranes 131
 Serous Membranes 131
 The Cutaneous Membrane 132
 Synovial Membranes 133
- 4-7) **Connective tissues create the internal framework of the body** 133
- 4-8) **The three types of muscle tissue are skeletal, cardiac, and smooth** 134
 Skeletal Muscle Tissue 135
 Cardiac Muscle Tissue 135
 Smooth Muscle Tissue 135
- 4-9) **Neural tissue responds to stimuli and conducts electrical impulses throughout the body** 137
- 4-10) **The response to tissue injury involves inflammation and regeneration** 138
 Inflammation 138
 Regeneration 138
- 4-11) **With advancing age, tissue repair declines and cancer rates increase** 138
 Aging and Tissue Structure 138
 Aging and Cancer Incidence 140

Chapter Review 140**Clinical Notes**

- Exfoliative Cytology 115
 Marfan's Syndrome 123
 Problems with Serous Membranes 133

Spotlight

- Tissue Repair 139

UNIT 2 SUPPORT AND MOVEMENT**The Integumentary System 144****An Introduction to the Integumentary System** 145

- 5-1) **The epidermis is composed of strata (layers) with various functions** 146
 Stratum Basale 147
 Stratum Spinosum 147
 Stratum Granulosum 148
 Stratum Lucidum 148
 Stratum Corneum 148
- 5-2) **Factors influencing skin color are epidermal pigmentation and dermal circulation** 149
 The Role of Epidermal Pigmentation 149
 The Role of Dermal Circulation 150

- 5-3) **Sunlight causes epidermal cells to convert a steroid into vitamin D₃** 150

- 5-4) **Epidermal growth factor has several effects on the epidermis and epithelia** 152

- 5-5) **The dermis is the tissue layer that supports the epidermis** 152

Dermal Strength and Elasticity 153

Cleavage Lines 153

The Dermal Blood Supply 153

Innervation of the Skin 154

- 5-6) **The hypodermis is tissue beneath the dermis that connects it to underlying tissues** 154

- 5-7) **Hair is composed of keratinized dead cells that have been pushed to the surface** 155

Hair Production 157

The Hair Growth Cycle 157

Types of Hairs 157

Hair Color 157

- 5-8) **Sebaceous glands and sweat glands are exocrine glands found in the skin** 158

Sebaceous Glands 158

Sweat Glands 159

Other Integumentary Glands 160

Control of Glandular Secretions and the Homeostatic Role of the Integument 160

- 5-9) **Nails are keratinized epidermal cells that protect the tips of fingers and toes** 160

- 5-10) **Several steps are involved in repairing the integument following an injury** 161

- 5-11) **Effects of aging include dermal thinning, wrinkling, and reduced melanocyte activity** 164

Chapter Review 166**Clinical Notes**

- Skin Cancer 151
 Decubitus Ulcers 154
 Liposuction 155
 Burns and Grafts 163
 Skin Abnormalities 164

**Osseous Tissue and Bone Structure 169****An Introduction to the Skeletal System** 170

- 6-1) **The skeletal system has five primary functions** 170

- 6-2) **Bones are classified according to shape and structure, and feature surface markings** 170

Bone Shapes 170

Bone Markings 171

Bone Structure 171

- 6-3 **Bone is composed of matrix and several types of cells: osteocytes, osteoblasts, osteoprogenitor cells, and osteoclasts** 173
 - Bone Matrix 174
 - Bone Cells 174
- 6-4 **Compact bone contains parallel osteons, and spongy bone contains trabeculae** 175
 - Compact Bone Structure 175
 - Spongy Bone Structure 177
 - The Periosteum and Endosteum 178
- 6-5 **Bones form through ossification and they enlarge through appositional growth and remodeling** 179
 - Endochondral Ossification 179
 - Intramembranous Ossification 182
 - The Blood and Nerve Supplies to Bone 182
- 6-6 **Bone growth and development depend on a balance between bone formation and bone resorption** 184
- 6-7 **Exercise, hormones, and nutrition affect bone development and the skeletal system** 184
 - The Effects of Exercise on Bone 184
 - Hormonal and Nutritional Effects on Bone 185
- 6-8 **Calcium plays a critical role in bone physiology** 186
 - The Skeleton as a Calcium Reserve 186
 - Hormones and Calcium Balance 187
- 6-9 **A fracture is a crack or break in a bone** 189
- 6-10 **Osteopenia has a widespread effect on aging skeletal tissue** 192

Chapter Review 193

Clinical Notes

- Heterotopic Bone Formation 179
- Abnormal Bone Development 186

Spotlight

- Types of Fractures and Steps in Repair 190

7 The Axial Skeleton 197

- ▶ **An Introduction to the Axial Skeleton** 198
- 7-1 **The 80 bones of the head and trunk make up the axial skeleton** 198
- 7-2 **The skull is composed of 8 cranial bones and 14 facial bones** 198
- 7-3 **Foramina and fissures of the skull serve as passageways for nerves and vessels** 212
- 7-4 **Each orbital complex contains an eye, and the nasal complex encloses the nasal cavities** 214
 - The Orbital Complexes 214
 - The Nasal Complex 214
- 7-5 **Fontanelles are non-ossified areas between cranial bones that allow for brain growth** 215

- 7-6 **The vertebral column has four spinal curves** 217
 - Spinal Curvature 217
 - Vertebral Anatomy 217
- 7-7 **The five vertebral regions are the cervical, thoracic, lumbar, sacral, and coccygeal** 220
 - Cervical Vertebrae 220
 - Thoracic Vertebrae 222
 - Lumbar Vertebrae 222
 - The Sacrum 223
 - The Coccyx 225
- 7-8 **The thoracic cage protects organs in the chest and provides sites for muscle attachment** 225
 - The Ribs 225
 - The Sternum 228

Chapter Review 229

Clinical Notes

- Temporomandibular Joint Syndrome 212
- Craniostenosis 216
- Kyphosis, Lordosis, and Scoliosis 218

8 The Appendicular Skeleton 232

- ▶ **An Introduction to the Appendicular Skeleton** 233
- 8-1 **The pectoral girdle attaches to the upper limbs and consists of the clavicles and scapulae** 233
 - The Clavicles 233
 - The Scapulae 233
- 8-2 **The upper limbs are adapted for freedom of movement** 236
 - The Humerus 236
 - The Ulna 236
 - The Radius 239
 - The Carpal Bones 239
 - The Metacarpal Bones and Phalanges 240
- 8-3 **The pelvic girdle attaches to the lower limbs and consists of two coxal bones** 240
 - The Pelvic Girdle 240
 - The Pelvis 242
- 8-4 **The lower limbs are adapted for locomotion and support** 244
 - The Femur 244
 - The Patella 245
 - The Tibia 245
 - The Fibula 246
 - The Tarsal Bones 247
 - The Metatarsal Bones and Phalanges 248
- 8-5 **Sex differences and age account for individual skeletal variation** 248

Chapter Review 250**Clinical Notes**

- Carpal Tunnel Syndrome 240
- Congenital Talipes Equinovarus 248

**9 Articulations 253****▶ An Introduction to Articulations 254**

- 9-1 ▶ Joints are categorized according to their range of motion or anatomical organization 254**
- 9-2 ▶ Synovial joints are freely movable articulations containing synovial fluid 254**
 - Articular Cartilages 254
 - Synovial Fluid 256
 - Accessory Structures 256
 - Factors That Stabilize Synovial Joints 257
- 9-3 ▶ Anatomical and functional properties of synovial joints enable various skeletal movements 258**
 - Describing Movement 258
 - Types of Movements at Synovial Joints 259
 - Types of Synovial Joints 261
- 9-4 ▶ Intervertebral discs and ligaments are structural components of intervertebral articulations 264**
 - Intervertebral Discs 264
 - Intervertebral Ligaments 265
 - Vertebral Movements 265
- 9-5 ▶ The shoulder is a ball-and-socket joint, and the elbow is a hinge joint 266**
 - The Shoulder Joint 266
 - The Elbow Joint 268
- 9-6 ▶ The hip is a ball-and-socket joint, and the knee is a hinge joint 269**
 - The Hip Joint 269
 - The Knee Joint 270
- 9-7 ▶ With advancing age, arthritis and other degenerative changes impair joint mobility 273**
- 9-8 ▶ The skeletal system supports and stores energy and minerals for other body systems 274**

Chapter Review 276**Clinical Notes**

- Bursitis and Bunions 257
- Knee Injuries 273

Spotlight

- Synovial Joints 263

**10 Muscle Tissue 279****▶ An Introduction to Muscle Tissue 280**

- 10-1 ▶ Skeletal muscle performs six major functions 280**
- 10-2 ▶ A skeletal muscle contains muscle tissue, connective tissues, blood vessels, and nerves 280**
 - Organization of Connective Tissues 280
 - Blood Vessels and Nerves 281
- 10-3 ▶ Skeletal muscle fibers have distinctive features 282**
 - The Sarcolemma and Transverse Tubules 283
 - Myofibrils 283
 - The Sarcoplasmic Reticulum 284
 - Sarcomeres 284
 - Sliding Filaments and Muscle Contraction 287
- 10-4 ▶ The nervous system communicates with skeletal muscles at the neuromuscular junction 290**
 - The Control of Skeletal Muscle Activity 290
 - Excitation–Contraction Coupling 290
 - Relaxation 296
- 10-5 ▶ Sarcomere shortening and muscle fiber stimulation produce tension 298**
 - Tension Production by Muscle Fibers 298
 - Tension Production by Skeletal Muscles 300
 - Motor Units and Tension Production 300
- 10-6 ▶ ATP provides energy for muscle contraction 305**
 - ATP and CP Reserves 305
 - ATP Generation 305
 - Energy Use and the Level of Muscular Activity 306
 - Muscle Fatigue 307
 - The Recovery Period 308
 - Hormones and Muscle Metabolism 308
- 10-7 ▶ Muscle performance capabilities depend on muscle fiber type and physical conditioning 309**
 - Types of Skeletal Muscle Fibers 309
 - Muscle Performance and the Distribution of Muscle Fibers 310
 - Muscle Hypertrophy and Atrophy 311
 - Physical Conditioning 311
- 10-8 ▶ Cardiac muscle tissue differs structurally and functionally from skeletal muscle tissue 313**
 - Structural Characteristics of Cardiac Muscle Tissue 313
 - Functional Characteristics of Cardiac Muscle Tissue 314
- 10-9 ▶ Smooth muscle tissue differs structurally and functionally from skeletal and cardiac muscle tissue 314**
 - Structural Characteristics of Smooth Muscle Tissue 315
 - Functional Characteristics of Smooth Muscle Tissue 316

Chapter Review 317**Clinical Notes**

- Tetanus 291
- Rigor Mortis 296
- Delayed-Onset Muscle Soreness 312

Spotlights

- Skeletal Muscle Innervation 292
- The Contraction Cycle 294

11 The Muscular System 322

▶ An Introduction to the Muscular System 323

- 11-1 ▶ Fascicle arrangement is correlated with muscle power and range of motion** 323
 - Parallel Muscles 324
 - Convergent Muscles 324
 - Pennate Muscles 324
 - Circular Muscles 324
- 11-2 ▶ The three classes of levers increase muscle efficiency** 324
- 11-3 ▶ Muscle origins are at the fixed end of muscles, whereas insertions are at the movable end of muscles** 326
 - Origins and Insertions 326
 - Actions 326
- 11-4 ▶ Descriptive terms are used to name skeletal muscles** 327
 - Location in the Body 327
 - Origin and Insertion 328
 - Fascicle Organization 328
 - Position 329
 - Structural Characteristics 329
 - Action 329
 - Axial and Appendicular Muscles 329
- 11-5 ▶ Axial muscles are muscles of the head and neck, vertebral column, trunk, and pelvic floor** 332
 - Muscles of the Head and Neck 332
 - Muscles of the Vertebral Column 339
 - Oblique and Rectus Muscles 342
 - Muscles of the Pelvic Floor 345
- 11-6 ▶ Appendicular muscles are muscles of the shoulders, upper limbs, pelvic girdle, and lower limbs** 347
 - Muscles of the Shoulders and Upper Limbs 350
 - Muscles of the Pelvis and Lower Limbs 359
- 11-7 ▶ With advancing age, the size and power of muscle tissue decrease** 368
- 11-8 ▶ Exercise produces responses in multiple body systems** 368

Chapter Review 370**Clinical Notes**

- Hernia 344
- Intramuscular Injections 345

UNIT 3 CONTROL AND REGULATION

12 Neural Tissue 374

▶ An Introduction to Neural Tissue 375

- 12-1 ▶ The nervous system has anatomical and functional divisions** 375
 - The Anatomical Divisions of the Nervous System 375
 - The Functional Divisions of the Nervous System 375
- 12-2 ▶ Neurons are nerve cells specialized for intercellular communication** 376
 - The Structure of Neurons 376
 - The Classification of Neurons 378
- 12-3 ▶ CNS and PNS neuroglia support and protect neurons** 380
 - Neuroglia of the Central Nervous System 380
 - Neuroglia of the Peripheral Nervous System 383
 - Neural Responses to Injuries 385
- 12-4 ▶ The transmembrane potential is the electrical potential of the cell's interior relative to its surroundings** 386
 - The Transmembrane Potential 387
 - Changes in the Transmembrane Potential 390
 - Graded Potentials 391
- 12-5 ▶ An action potential is an electrical event** 394
 - The All-or-None Principle 394
 - Generation of Action Potentials 394
 - Propagation of Action Potentials 395
- 12-6 ▶ Axon diameter, in addition to myelin, affects propagation speed** 400
- 12-7 ▶ At synapses, communication occurs among neurons or between neurons and other cells** 400
 - Synaptic Activity 400
 - General Properties of Synapses 400
 - Cholinergic Synapses 401
- 12-8 ▶ Neurotransmitters and neuromodulators have various functions** 403
 - The Activities of Other Neurotransmitters 403
 - Neuromodulators 404
 - How Neurotransmitters and Neuromodulators Work 405

- 12-9) Individual neurons process information by integrating excitatory and inhibitory stimuli 408
- Postsynaptic Potentials 408
- Presynaptic Inhibition and Presynaptic Facilitation 410
- The Rate of Generation of Action Potentials 410

Chapter Review 412

Clinical Notes

- Rabies 378
- Tumors 381
- Demyelination 383

Spotlight

- Generation of an Action Potential 396

13 The Spinal Cord, Spinal Nerves, and Spinal Reflexes 416

- ▶ An Introduction to the Spinal Cord, Spinal Nerves, and Spinal Reflexes 417

- 13-1) The brain and spinal cord make up the central nervous system, and the cranial nerves and spinal nerves constitute the peripheral nervous system 417
- 13-2) The spinal cord is surrounded by three meninges and conveys sensory and motor information 418
 - Gross Anatomy of the Spinal Cord 418
 - Spinal Meninges 420
- 13-3) Gray matter is the region of integration and command initiation, and white matter carries information from place to place 422
 - Organization of Gray Matter 422
 - Organization of White Matter 424
- 13-4) Spinal nerves form plexuses that are named according to their level of emergence from the vertebral canal 424
 - Anatomy of Spinal Nerves 424
 - Peripheral Distribution of Spinal Nerves 424
 - Nerve Plexuses 425
- 13-5) Neuronal pools are functional groups of interconnected neurons 434
- 13-6) Reflexes are rapid, automatic responses to stimuli 436
 - The Reflex Arc 436
 - Classification of Reflexes 437
- 13-7) Spinal reflexes vary in complexity 438
 - Monosynaptic Reflexes 438
 - Polysynaptic Reflexes 440
- 13-8) The brain can affect spinal cord–based reflexes 442
 - Voluntary Movements and Reflex Motor Patterns 442
 - Reinforcement and Inhibition 443

Chapter Review 444

Clinical Notes

- Anesthesia 422
- Shingles 428

Spotlight

- Peripheral Distribution of Spinal Nerves 426

14 The Brain and Cranial Nerves 448

- ▶ An Introduction to the Brain and Cranial Nerves 449

- 14-1) The brain has several principal structures, each with specific functions 449
 - Major Brain Regions and Landmarks 449
 - Embryology of the Brain 450
 - Ventricles of the Brain 451
- 14-2) The brain is protected and supported by the cranial meninges, cerebrospinal fluid, and the blood–brain barrier 452
 - The Cranial Meninges 452
 - Cerebrospinal Fluid 453
 - The Blood Supply to the Brain 454
- 14-3) The medulla oblongata, which is continuous with the spinal cord, contains vital centers 456
- 14-4) The pons contains nuclei and tracts that carry or relay sensory and motor information 459
- 14-5) The cerebellum coordinates learned and reflexive patterns of muscular activity at the subconscious level 460
- 14-6) The midbrain regulates auditory and visual reflexes and controls alertness 460
- 14-7) The diencephalon integrates sensory information with motor output at the subconscious level 463
 - The Thalamus 463
 - The Hypothalamus 464
- 14-8) The limbic system is a group of tracts and nuclei with various functions 466
- 14-9) The cerebrum, the largest region of the brain, contains motor, sensory, and association areas 468
 - The Cerebral Cortex 468
 - The White Matter of the Cerebrum 468
 - The Basal Nuclei 470
 - Motor and Sensory Areas of the Cortex 472
- 14-10) Cranial reflexes involve sensory and motor fibers of cranial nerves 489

Chapter Review 490

Clinical Notes

- Epidural and Subdural Hemorrhages 454
- Disconnection Syndrome 474
- Aphasia and Dyslexia 476

15

Neural Integration I: Sensory Pathways and the Somatic Nervous System 494

An Introduction to Sensory Pathways and the Somatic Nervous System 495

- 15-1 **Sensory information from all parts of the body is routed to the somatosensory cortex** 495
- 15-2 **Sensory receptors connect our internal and external environments with the nervous system** 495
 - The Detection of Stimuli 496
 - The Interpretation of Sensory Information 497
 - Adaptation 497
- 15-3 **General sensory receptors are classified by the type of stimulus that excites them** 498
 - Nociceptors 498
 - Thermoreceptors 499
 - Mechanoreceptors 499
 - Chemoreceptors 502
- 15-4 **Separate pathways carry somatic sensory and visceral sensory information** 502
 - Somatic Sensory Pathways 503
 - Visceral Sensory Pathways 508
- 15-5 **The somatic nervous system is an efferent division that controls skeletal muscles** 508
 - The Corticospinal Pathway 509
 - The Medial and Lateral Pathways 510
 - The Basal Nuclei and Cerebellum 511
 - Levels of Processing and Motor Control 512

Chapter Review 513

Clinical Notes

- Assessment of Tactile Sensitivities 502
- Cerebral Palsy 510
- Amyotrophic Lateral Sclerosis 512
- Anencephaly 512

Spotlight

- Somatic Sensory Pathways 504

16

Neural Integration II: The Autonomic Nervous System and Higher-Order Functions 516

An Introduction to the Autonomic Nervous System and Higher-Order Functions 517

- 16-1 **The autonomic nervous system is involved in the unconscious regulation of visceral functions and has sympathetic and parasympathetic divisions** 517
 - Organization of the ANS 517
 - Divisions of the ANS 518

- 16-2 **The sympathetic division consists of preganglionic neurons and ganglionic neurons involved in using energy and increasing metabolic rate** 519
 - Organization and Anatomy of the Sympathetic Division 520
 - Sympathetic Activation 522

- 16-3 **Stimulation of sympathetic neurons leads to the release of various neurotransmitters** 524
 - Sympathetic Stimulation and the Release of NE and E 525
 - Sympathetic Stimulation and the Release of ACh and NO 525
 - Summary: The Sympathetic Division 525

- 16-4 **The parasympathetic division consists of preganglionic neurons and ganglionic neurons involved in conserving energy and lowering metabolic rate** 526
 - Organization and Anatomy of the Parasympathetic Division 526
 - Parasympathetic Activation 526

- 16-5 **Stimulation of parasympathetic neurons leads to the release of the neurotransmitter ACh** 529
 - Neurotransmitter Release 529
 - Membrane Receptors and Responses 529
 - Summary: The Parasympathetic Division 529

- 16-6 **The sympathetic and parasympathetic divisions interact, creating dual innervation** 530
 - Anatomy of Dual Innervation 531
 - Autonomic Tone 531

- 16-7 **Visceral reflexes play a role in the integration and control of autonomic functions** 534
 - Visceral Reflexes 534
 - Higher Levels of Autonomic Control 535
 - The Integration of SNS and ANS Activities 535

- 16-8 **Higher-order functions include memory and states of consciousness** 536
 - Memory 536
 - States of Consciousness 539

- 16-9 **Neurotransmitters influence brain chemistry and behavior** 541

- 16-10 **Aging produces various structural and functional changes in the nervous system** 541

Chapter Review 544

Clinical Notes

- Amnesia 538
- Categorizing Nervous System Disorders 540
- Alzheimer's Disease 542

17**The Special Senses 548**

- ▶ **An Introduction to the Special Senses** 549
- 17-1 ▶ **Olfaction, the sense of smell, involves olfactory receptors responding to chemical stimuli** 549
 - Olfactory Receptors 550
 - Olfactory Pathways 550
 - Olfactory Discrimination 550
- 17-2 ▶ **Gustation, the sense of taste, involves taste receptors responding to chemical stimuli** 551
 - Taste Receptors 551
 - Gustatory Pathways 551
 - Gustatory Discrimination 551
- 17-3 ▶ **Internal eye structures contribute to vision, while accessory eye structures provide protection** 555
 - Accessory Structures of the Eye 555
 - The Eye 556
- 17-4 ▶ **Photoreceptors respond to light and change it into electrical signals essential to visual physiology** 565
 - Visual Physiology 565
 - The Visual Pathways 572
- 17-5 ▶ **Equilibrium sensations originate within the internal ear, while hearing involves the detection and interpretation of sound waves** 574
 - Anatomy of the Ear 574
 - Equilibrium 577
 - Hearing 581

UNIT 4 FLUIDS AND TRANSPORT

19 Blood 638

► An Introduction to Blood and the Cardiovascular System 639

19-1 ► Blood has several important functions and unique physical characteristics 639

19-2 ► Plasma, the fluid portion of blood, contains significant quantities of plasma proteins 642

The Composition of Plasma 642

Plasma Proteins 642

19-3 ► Red blood cells, formed by erythropoiesis, contain hemoglobin that can be recycled 643

Abundance of RBCs 643

Structure of RBCs 643

Hemoglobin 644

RBC Formation and Turnover 645

RBC Production 648

19-4 ► The ABO blood types and Rh system are based on antigen–antibody responses 650

Cross-Reactions in Transfusions 650

Testing for Transfusion Compatibility 650

19-5 ► The various types of white blood cells contribute to the body's defenses 652

WBC Circulation and Movement 653

Types of WBCs 653

The Differential Count and Changes in WBC Profiles 657

WBC Production 657

19-6 ► Platelets, disc-shaped structures formed from megakaryocytes, function in the clotting process 660

Platelet Functions 660

Platelet Production 660

19-7 ► Hemostasis involves vascular spasm, platelet plug formation, and blood coagulation 661

The Vascular Phase 661

The Platelet Phase 661

The Coagulation Phase 662

Fibrinolysis 665

Chapter Review 666

Clinical Notes

Collecting Blood for Analysis 639

Plasma Expanders 643

Abnormal Hemoglobin 646

Spotlights

The Composition of Whole Blood 640

Hemolytic Disease of the Newborn 654

20 The Heart 669

► An Introduction to the Cardiovascular System 670

20-1 ► The heart is a four-chambered organ, supplied by the coronary circulation, that pumps oxygen-poor blood to the lungs and oxygen-rich blood to the rest 670

The Pericardium 670

Superficial Anatomy of the Heart 672

The Heart Wall 672

Internal Anatomy and Organization 672

Connective Tissues and the Cardiac Skeleton 678

The Blood Supply to the Heart 680

20-2 ► The conducting system distributes electrical impulses through the heart, and an electrocardiogram records the associated electrical events 684

Cardiac Physiology 684

The Conducting System 684

The Electrocardiogram 687

Contractile Cells 688

20-3 ► Events during a complete heartbeat constitute a cardiac cycle 691

Phases of the Cardiac Cycle 691

Pressure and Volume Changes in the Cardiac Cycle 692

Heart Sounds 693

20-4 ► Cardiodynamics examines the factors that affect cardiac output 695

Overview: Factors Affecting Cardiac Output 697

Factors Affecting the Heart Rate 697

Factors Affecting the Stroke Volume 699

Summary: The Control of Cardiac Output 701

The Heart and the Cardiovascular System 702

Chapter Review 704

Clinical Note

Abnormal Conditions Affecting Cardiac Output 697

Spotlights

Heart Disease and Heart Attacks 682

Cardiac Arrhythmias 689

21 Blood Vessels and Circulation 707

► An Introduction to Blood Vessels and Circulation 708

21-1 ► Arteries, arterioles, capillaries, venules, and veins differ in size, structure, and functional properties 708

The Structure of Vessel Walls 708

Differences between Arteries and Veins 709

Arteries 710

Capillaries 711

Veins 715

The Distribution of Blood 716

21-2 **Pressure and resistance determine blood flow and affect rates of capillary exchange** 717

Pressure 718

Total Peripheral Resistance 718

An Overview of Cardiovascular Pressures 719

Capillary Pressures and Capillary Exchange 722

21-3 **Cardiovascular regulatory mechanisms involve autoregulation, neural mechanisms, and endocrine responses** 725

Autoregulation of Blood Flow within Tissues 726

Neural Mechanisms 726

Hormones and Cardiovascular Regulation 731

21-4 **The cardiovascular system adapts to physiological stress and maintains a special vascular supply to the brain, heart, and lungs** 733

The Cardiovascular Response to Exercise 733

The Cardiovascular Response to Hemorrhaging 734

Vascular Supply to Special Regions 735

21-5 **The pulmonary and systemic circuits of the cardiovascular system exhibit three general functional patterns** 736

21-6 **In the pulmonary circuit, deoxygenated blood enters the lungs in arteries, and oxygenated blood leaves the lungs via veins** 737

21-7 **The systemic circuit carries oxygenated blood from the left ventricle to tissues and organs other than the pulmonary exchange surfaces, and returns deoxygenated blood to the right atrium** 738

Systemic Arteries 738

Systemic Veins 748

21-8 **Modifications of fetal and maternal cardiovascular systems promote the exchange of materials, and independence is achieved at birth** 755

Placental Blood Supply 755

Fetal Circulation in the Heart and Great Vessels 755

Cardiovascular Changes at Birth 756

21-9 **Aging affects the blood, heart, and blood vessels** 758

Chapter Review 760

Clinical Notes

Arteriosclerosis 712

Edema 725

Spotlight

Congenital Heart Problems 757

The Lymphatic System and Immunity 764

22-1 **An Introduction to the Lymphatic System and Immunity** 765

22-1 **Surface barriers and internal defenses constitute innate defenses, and lymphocytes provide adaptive defenses** 765

22-2 **Lymphatic vessels, lymphocytes, lymphoid tissues, and lymphoid organs function in body defenses** 765

Functions of the Lymphatic System 765

Lymphatic Vessels 766

Lymphocytes 768

Lymphoid Tissues 772

Lymphoid Organs 773

The Lymphatic System and Body Defenses 776

22-3 **Innate (nonspecific) defenses do not discriminate between potential threats and respond the same regardless of the invader** 778

Physical Barriers 778

Phagocytes 778

Immunological Surveillance 780

Interferons 781

Complement System 782

Inflammation 782

Fever 784

22-4 **Adaptive (specific) defenses respond to individual threats and are either cell-mediated or antibody-mediated** 785

Forms of Immunity 785

Properties of Immunity 786

An Introduction to the Immune Response 787

22-5 **T cells play a role in initiating, maintaining, and controlling the immune response** 787

Antigen Presentation 788

Antigen Recognition 789

Activation of CD8 T Cells 790

Activation of CD4 T Cells 791

22-6 **B cells respond to antigens by producing specific antibodies** 792

B Cell Sensitization and Activation 792

Antibody Structure 793

Primary and Secondary Responses to Antigen

Exposure 796

Summary of the Immune Response 797

22-7 **Immunological competence enables a normal immune response; abnormal responses result in immune disorders** 800

The Development of Immunological Competence 800

Cytokines of the Immune System 800

Immune Disorders 801
Stress and the Immune Response 804

22-8 ▶ **The immune response diminishes with advancing age** 806

22-9 ▶ **The nervous and endocrine systems influence the immune response** 806

Chapter Review 808

Clinical Notes

Cancer and the Lymphatic System 773
Graft Rejection and Immunosuppression 788
AIDS 805

Spotlight

Cytokines of the Immune System 802

UNIT 5 ENVIRONMENTAL EXCHANGE

23

The Respiratory System 813

▶ **An Introduction to the Respiratory System** 814

23-1 ▶ **The respiratory system, organized into an upper respiratory system and a lower respiratory system, has several basic functions** 814

Functions of the Respiratory System 814
Organization of the Respiratory System 814

23-2 ▶ **Located outside the thoracic cavity, the upper respiratory system consists of the nose, nasal cavity, paranasal sinuses, and pharynx** 817

The Nose, Nasal Cavity, and Paranasal Sinuses 817
The Pharynx 819

23-3 ▶ **Composed of cartilages, ligaments, and muscles, the larynx produces sound** 819

Cartilages and Ligaments of the Larynx 819
Sound Production 821
The Laryngeal Musculature 821

23-4 ▶ **The trachea and primary bronchi convey air to and from the lungs** 822

The Primary Bronchi 822

23-5 ▶ **Enclosed by a pleural membrane, the lungs are paired organs containing alveoli, which permit gaseous exchange** 822

Lobes and Surfaces of the Lungs 823
The Bronchi 823
The Bronchioles 825
Alveolar Ducts and Alveoli 827
The Blood Supply to the Lungs 829
The Pleural Cavities and Pleural Membranes 829

23-6 ▶ **External respiration and internal respiration allow gaseous exchange within the body** 829

23-7 ▶ **Pulmonary ventilation—the exchange of air between the atmosphere and the lungs—involves pressure changes, muscle movement, and respiratory rates and volumes** 830

The Movement of Air 830
Pressure Changes during Inhalation and Exhalation 832

The Mechanics of Breathing 834
Respiratory Rates and Volumes 836

23-8 ▶ **Gas exchange depends on the partial pressures of gases and the diffusion of molecules** 838

The Gas Laws 838
Diffusion and Respiratory Function 840

23-9 ▶ **Most oxygen is transported bound to hemoglobin; and carbon dioxide is transported in three ways: as carbonic acid, bound to hemoglobin, or dissolved in plasma** 841

Oxygen Transport 842
Carbon Dioxide Transport 845
Summary: Gas Transport 846

23-10 ▶ **Neurons in the medulla oblongata and pons, along with respiratory reflexes, control respiration** 847

Local Regulation of Gas Transport and Alveolar Function 847
The Respiratory Centers of the Brain 848
Respiratory Reflexes 849
Voluntary Control of Respiration 854
Changes in the Respiratory System at Birth 854

23-11 ▶ **Respiratory performance declines with age** 855

23-12 ▶ **The respiratory system provides oxygen to, and eliminates carbon dioxide from, other organ systems** 856

Chapter Review 858

Clinical Notes

Breakdown of the Respiratory Defense System 817
Pneumothorax 834
Decompression Sickness 840
Blood Gas Analysis 841
Carbon Monoxide Poisoning 845
Emphysema and Lung Cancer 855

Spotlight

Control of Respiration 850

24

The Digestive System 862

▶ **An Introduction to the Digestive System** 863

24-1 ▶ **The digestive system, consisting of the digestive tract and accessory organs, has overlapping food utilization functions** 863

Functions of the Digestive System 863
The Digestive Organs and the Peritoneum 864

Histological Organization of the Digestive Tract 865
 The Movement of Digestive Materials 868
 Control of Digestive Functions 869

24-2 The oral cavity contains the tongue, salivary glands, and teeth, each with specific functions 870

The Tongue 871
 Salivary Glands 871
 The Teeth 873

24-3 The pharynx is a passageway between the oral cavity and esophagus 876

24-4 The esophagus is a muscular tube that transports solids and liquids from the pharynx to the stomach 876

Histology of the Esophagus 877
 Swallowing 877

24-5 The stomach is a J-shaped organ that receives the bolus from the esophagus and aids in chemical and mechanical digestion 878

Anatomy of the Stomach 878
 Regulation of Gastric Activity 882
 Digestion and Absorption in the Stomach 882

24-6 The small intestine digests and absorbs nutrients, and associated glandular organs assist with the digestive process 883

The Small Intestine 883
 Histology of the Small Intestine 883
 Intestinal Secretions 888
 Intestinal Movements 888
 The Pancreas 888
 The Liver 890
 The Gallbladder 895
 The Coordination of Secretion and Absorption 895

24-7 The large intestine is divided into three parts with regional specialization 898

The Cecum 898
 The Colon 898
 The Rectum 900
 Histology of the Large Intestine 900
 Physiology of the Large Intestine 900

24-8 Digestion is the mechanical and chemical alteration of food that allows the absorption and use of nutrients 903

The Processing and Absorption of Nutrients 903
 Carbohydrate Digestion and Absorption 903
 Lipid Digestion and Absorption 906
 Protein Digestion and Absorption 907
 Water Absorption 907
 Ion Absorption 908

24-9 Many age-related changes affect digestion and absorption 909

24-10 The digestive system is extensively integrated with other body systems 909

Chapter Review 911

Clinical Notes

Peritonitis 865
 Epithelial Renewal and Repair 867
 Mumps 872
 Gastritis and Peptic Ulcers 882
 Pancreatitis 888
 Cirrhosis 894
 Colorectal Cancer 900
 Inflammatory and Infectious Disorders of the Digestive System 906

Spotlights

Regulation of Gastric Activity 884
 Chemical Events in Digestion 904

25 Metabolism and Energetics 916

An Introduction to Metabolism and Energetics 917

25-1 Metabolism refers to all the chemical reactions in the body, and energetics refers to the flow and transformation of energy 917

25-2 Carbohydrate metabolism involves glycolysis, ATP production, and gluconeogenesis 919

Glycolysis 919
 Mitochondrial ATP Production 921
 Energy Yield of Glycolysis and Cellular Respiration 925
 Gluconeogenesis 927

25-3 Lipid metabolism involves lipolysis, beta-oxidation, and the transport and distribution of lipids as free fatty acids and lipoproteins 928

Lipid Catabolism 928
 Lipid Synthesis 928
 Lipid Transport and Distribution 928

25-4 Protein catabolism involves transamination and deamination, whereas protein synthesis involves amination and transamination 932

Amino Acid Catabolism 932
 Protein Synthesis 934

25-5 The body experiences two patterns of metabolic activity: the absorptive and postabsorptive states 934

25-6 Adequate nutrition is necessary to prevent deficiency disorders and ensure physiological functioning 935

Food Groups and the MyPyramid Plan 935
 Nitrogen Balance 939
 Minerals 939
 Vitamins 939
 Diet and Disease 942

- 25-7 **Metabolic rate is the average caloric expenditure, and thermoregulation involves balancing heat-producing and heat-losing mechanisms** 943
 - Energy Gains and Losses 943
 - Thermoregulation 944

Chapter Review 949

26 The Urinary System 953

- An Introduction to the Urinary System** 954
- 26-1 **Consisting of the kidneys, ureters, urinary bladder, and urethra, the urinary system has three primary functions** 954
- 26-2 **Kidneys are highly vascular structures containing functional units called nephrons, which perform filtration, reabsorption, and secretion** 954
 - Sectional Anatomy of the Kidneys 955
 - Blood Supply and Innervation of the Kidneys 957
 - The Nephron 957
- 26-3 **Different segments of the nephron form urine by filtration, reabsorption, and secretion** 963
 - Basic Processes of Urine Formation 964
- 26-4 **Hydrostatic and colloid osmotic pressures influence glomerular filtration pressure, which in turn affects the glomerular filtration rate** 968
 - Filtration Pressures 969
 - The Glomerular Filtration Rate 969
 - Control of the GFR 970
- 26-5 **Countercurrent multiplication and the influence of antidiuretic hormone and aldosterone affect reabsorption and secretion** 972
 - Reabsorption and Secretion at the PCT 972
 - The Nephron Loop and Countercurrent Multiplication 974
 - Reabsorption and Secretion at the DCT 976
 - Reabsorption and Secretion along the Collecting System 977
 - The Control of Urine Volume and Osmotic Concentration 978
 - The Function of the Vasa Recta 981
 - The Composition of Normal Urine 981

- 26-6 **Urine is transported via the ureters, stored in the bladder, and eliminated through the urethra, aided by the micturition reflex** 984
 - The Ureters 985
 - The Urethra 986
 - The Micturition Reflex and Urination 988
- 26-7 **Age-related changes affect kidney function and the micturition reflex** 990
- 26-8 **The urinary system is one of several body systems involved in waste excretion** 991

Chapter Review 993

27 Fluid, Electrolyte, and Acid-Base Balance 997

- An Introduction to Fluid, Electrolyte, and Acid-Base Balance** 998
- 27-1 **Fluid balance, electrolyte balance, and acid-base balance are interrelated and essential to homeostasis** 998
- 27-2 **The ECF and ICF make up the fluid compartments, which also contain cations and anions** 999
 - The ECF and the ICF 1000
 - Basic Concepts in the Regulation of Fluids and Electrolytes 1000
 - An Overview of the Primary Regulatory Hormones 1001
 - The Interplay between Fluid Balance and Electrolyte Balance 1002
- 27-3 **Hydrostatic and osmotic pressures regulate the movement of water and electrolytes to maintain fluid balance** 1002
 - Fluid Movement within the ECF 1003
 - Fluid Gains and Losses 1003
 - Fluid Shifts 1004
- 27-4 **Sodium, potassium, calcium, and chloride balance is essential for maintaining homeostasis** 1006
 - Sodium Balance 1006
 - Potassium Balance 1007
 - Balance of Other Electrolytes 1009
- 27-5 **In acid-base balance, regulation of hydrogen ions in body fluids involves buffer systems and renal and respiratory compensatory mechanisms** 1011

- The Importance of pH Control 1011
- Types of Acids in the Body 1012
- Mechanisms of pH Control 1012
- Maintenance of Acid–Base Balance 1016

27-6 **Respiratory acidosis/alkalosis and metabolic acidosis/alkalosis are classes of acid–base balance disturbances** 1019

- Respiratory Acidosis 1020
- Respiratory Alkalosis 1022
- Metabolic Acidosis 1022
- Metabolic Alkalosis 1024
- The Detection of Acidosis and Alkalosis 1024

27-7 **Aging affects several aspects of fluid, electrolyte, and acid–base balance** 1026

Chapter Review 1027

Clinical Notes

- Water and Weight Loss 1005
- Athletes and Salt Loss 1009

UNIT 6 CONTINUITY OF LIFE

28 The Reproductive System 1031

An Introduction to the Reproductive System 1032

- 28-1** Basic reproductive system structures are gonads, ducts, accessory glands and organs, and external genitalia 1032
- 28-2** Spermatogenesis occurs in the testes, and hormones from the hypothalamus, anterior lobe of the pituitary gland, and testes control male reproductive functions 1032
 - The Testes 1032
 - Spermatogenesis 1038
 - The Anatomy of a Spermatozoon 1040
 - The Male Reproductive Tract 1041
 - The Accessory Glands 1044
 - Semen 1045
 - The External Genitalia 1046
 - Hormones and Male Reproductive Function 1046
- 28-3** Oogenesis occurs in the ovaries, and hormones from the pituitary gland and gonads control female reproductive functions 1049
 - The Ovaries 1050
 - The Uterine Tubes 1055
 - The Uterus 1056
 - The Vagina 1060
 - The External Genitalia 1061
 - The Mammary Glands 1062

- Hormones and the Female Reproductive Cycle 1064
- Summary: Hormonal Regulation of the Female Reproductive Cycle 1064

28-4 **The autonomic nervous system influences male and female sexual function** 1068

- Male Sexual Function 1068
- Female Sexual Function 1069

28-5 **With age, decreasing levels of reproductive hormones cause functional changes** 1069

- Menopause 1069
- The Male Climacteric 1070

28-6 **The reproductive system secretes hormones affecting growth and metabolism of all body systems** 1070

Chapter Review 1073

29 Development and Inheritance 1076

An Introduction to Development and Inheritance 1077

- 29-1** Development, marked by various stages, is a continuous process that occurs from fertilization to maturity 1077
- 29-2** Fertilization—the fusion of a secondary oocyte and a spermatozoon—forms a zygote 1077
 - The Oocyte at Ovulation 1078
 - Oocyte Activation 1078
- 29-3** Gestation consists of three stages of prenatal development: the first, second, and third trimesters 1080
- 29-4** Cleavage, implantation, placentation, and embryogenesis are critical events of the first trimester 1080
 - Cleavage and Blastocyst Formation 1081
 - Implantation 1082
 - Placentation 1085
 - Embryogenesis 1088
- 29-5** During the second and third trimesters, maternal organ systems support the developing fetus, and the uterus undergoes structural and functional changes 1092
 - Pregnancy and Maternal Systems 1092
 - Structural and Functional Changes in the Uterus 1094

29-6 Labor consists of the dilation, expulsion, and placental stages 1095

- Stages of Labor 1095
- Premature Labor 1097
- Difficult Deliveries 1097
- Multiple Births 1097

29-7 Postnatal stages are the neonatal period, infancy, childhood, adolescence, maturity, and senescence 1098

- The Neonatal Period, Infancy, and Childhood 1098
- Adolescence and Maturity 1101
- Senescence 1102

29-8 Genes and chromosomes determine patterns of inheritance 1102

- Patterns of Inheritance 1103
- Sources of Individual Variation 1106
- Sex-Linked Inheritance 1108
- The Human Genome Project and Beyond 1108

Chapter Review 1111
