Contents

<i>List of contributors</i>	<i>xv</i>	<i>Preface</i>	<i>xxi</i>
<i>Foreword by Julian Bion</i>	<i>xvii</i>	<i>List of abbreviations</i>	<i>xxiii</i>
<i>Foreword by Ged Williams</i>	<i>xix</i>		

Chapter 1 Scope and delivery of evidence-based care 1

John W. Albarran and Annette Richardson

Importance of critical care	2	Supporting evidence-based practice	7
Background and classification of critically ill patients	2	Integrated governance	7
National guidance	3	Using this book	8
Evidence-based practice	3		
Definitions	3	<i>References</i>	9
Debates on the nature of 'evidence'	5		

Chapter 2 Competency-based practice 11

Julie Scholes, Jo Richmond and Jane Mallett

Introduction	12	Assessing competence: when and how	16
Defining competence	12	Objective Structured Clinical Evaluation (OSCE) and simulation	17
Competence acquisition	12	Linking the technical with humanistic care	17
Defining the specialty	13		
Competency-based curriculum	13	<i>References and further reading</i>	24
Competency and the relationship with integrated governance	15		

Chapter 3 Recognizing and managing the critically ill and 'at risk' patient on a ward 27

Mandy Odell

Definition	28	3.2 Automated blood pressure measurement	42
Aims and indications	28	3.3 Pulse measurement	44
Background	28	3.4 Temperature measurement	45
Rapid response systems	29		
Assessing and managing the deteriorating patient	31	Competency statements for Chapter 3	
ABCDE assessment process	31	3.1 Specific procedure competency statements for recognizing and managing the deteriorating patient	46
Summary	40	<i>References and further reading</i>	47
Procedure guidelines for Chapter 3			
3.1 Blood pressure measurement (manual) for a patient in bed	40		

Chapter 4 Admitting a critically ill patient 49

Vanessa Gibson and Karen Hill

Definition	50	Procedure guidelines for Chapter 4	
Aims and indications	50	4.1 Admitting a patient to the critical care unit	55
Background	50	4.2 Recording status on admission	56
Calling for appropriate assistance	52		
Admission of a patient to a level 2 or 3 care facility	52	Competency statements for Chapter 4	
Recording status on admission	53	4.1 Specific procedure competency statements for admission to the critical care unit	59
Establishing a rapport with the patient	54		
Establishing a rapport with family and carers	54	References and further reading	61

Chapter 5 Assessment, monitoring and interventions for the respiratory system 63

Maureen Coombs, Judy Dyos, David Waters and Ian Nesbitt

Clinical Assessment	64	Interventions for the Respiratory System	78
Chest auscultation	64	Ventilatory support	78
Definition	64	Indications for ventilatory support	78
Indications for chest auscultation	64	Background	79
Background	64	Non-invasive ventilation	80
Chest auscultation in critical care	64	Definition of non-invasive ventilatory (NIV) support	80
Arterial blood gas sampling	66	NIV in critical care – an overview	80
Definition	66	Invasive ventilation	82
Indications for arterial blood gas sampling	66	Definition of invasive ventilator support	82
Background	66	Background	83
Arterial blood sampling in critical care	67	Invasive ventilation in critical care	83
Pulse oximetry	69	Invasive ventilation modes	83
Definition	69	Weaning from mechanical ventilation	87
Indications for pulse oximetry monitoring	69	Definition	87
Background	69	Aim	87
Pulse oximetry in critical care	69	Background	87
Airway management and care with adjunct airways	71	Reduction of mechanical support	88
Definition	71	Extubation/decannulation	89
Aims and indications	71	Other respiratory interventions	90
Background	71	Intermittent positive pressure breathing (IPPB, e.g. Bird, Bennett PR2)	90
Airway management in critical care	72	Definition	90
Monitoring Airway Adjuncts	76	Indications for intermittent positive pressure breathing	90
Partial pressure of end tidal carbon dioxide (ETCO ₂) monitoring	76	Contraindications	90
Definition	76	Complications	90
Indications for end tidal CO ₂ monitoring	76	Background	90
Background	76	Intermittent positive pressure breathing in critical care	90
ETCO ₂ monitoring in critical care	76	Suctioning via a tracheal tube (endotracheal or tracheostomy)	91
Measuring endotracheal/tracheostomy tube cuff pressure	77	Definition	91
Definition	77	Aim and indications	91
Indications for measuring endotracheal/tracheostomy tube cuff pressure	77	Background	92
Background	77	Suctioning through endotracheal and tracheal tubes	93
Endotracheal/tracheostomy tubes in critical care	78		

Humidification	94	5.18 Intermittent positive pressure breathing (Bird)	131
Definition	94	5.19 Endotracheal extubation	132
Aims and indications	94	5.20 Suctioning	134
Background	94	5.21 Humidification	138
Humidifiers	94	5.22 Manual hyperinflation	139
Manual hyperinflation and hyperoxygenation	96	5.23 Prone positioning	140
Definition	96	5.24 Insertion of a chest drain	143
Aims and indications	96	5.25 Chest drain removal on a ventilated patient	145
Background	97		
Manual hyperinflation and hyperoxygenation in critical care	97	Competency statements for Chapter 5	
Prone ventilation	98	5.1 Specific procedure competency statements for chest auscultation	147
Definition	98	5.2 Specific procedure competency statements for arterial blood sampling	148
Aims and indications	98	5.3 Specific procedure competency statements for pulse oximetry	149
Background	98	5.4 Specific procedure competency statements for nasopharyngeal airway and oropharyngeal airway	149
Risks of prone ventilation	98	5.5 Specific procedure competency statements for insertion of an endotracheal tube	150
Chest drains	100	5.6 Specific procedure competency statements for tracheostomy formation and tube insertion	152
Definition	100	auscultation	152
Aims and indications	100	5.7 Specific procedure competency statements for tracheostomy removal/decannulation	153
Background	100	5.8 Specific procedure competency statements for end tidal CO ₂ (ETCO ₂) monitoring	155
Pneumothorax	100	5.9 Specific procedure competency statements for tracheal cuff pressure measurement	156
Pleural fluid	100	5.10 Specific procedure competency statements for non-invasive ventilator (NIV) therapy	157
Chest drain insertion	101	5.11 Specific procedure competency statements for invasive ventilator therapy care	158
Management of chest drains	101	5.12 Specific procedure competency statements for intermittent positive pressure breathing (IPPB) (Bird)	159
Chest drain removal	103	5.13 Specific procedure competency statements for endotracheal tube extubation	159
Flexible fiberoptic bronchoscopy	105	5.14 Specific procedure competency statements for suctioning	161
Definition	105	5.15 Specific procedure competency statements for humidification	162
Indications for flexible bronchoscopy	105	5.16 Specific procedure competency statements for manual hyperinflation	163
Contraindications and complications	105	5.17 Specific procedure competency statements for prone positioning	164
Background	105	5.18 Specific procedure competency statements for insertion of a chest drain	165
Bronchoscopy in critical care	105	5.19 Specific procedure competency statements for removal of a chest drain	166
Competency and troubleshooting	105		
Summary	105	<i>References and further reading</i>	167
Procedure guidelines for Chapter 5			
5.1 Chest auscultation	106		
5.2 Arterial puncture: radial artery	107		
5.3 Arterial blood gas sampling: arterial cannula	109		
5.4 Pulse oximetry	110		
5.5 Insertion and removal of a nasopharyngeal (NP) tube	111		
5.6 Insertion and removal of an oropharyngeal airway	113		
5.7 Endotracheal tube insertion	114		
5.8 Tracheostomy formation and tube insertion	116		
5.9 Tracheostomy care: stoma care and dressing changes	118		
5.10 Inner cannula care	119		
5.11 Tracheostomy removal (decannulation)	121		
5.12 End tidal CO ₂ monitoring	122		
5.13 Tracheal cuff pressure measurement	124		
5.14 Continuous positive airway pressure	125		
5.15 BiPAP	126		
5.16 Invasive ventilator therapy care	128		
5.17 Weaning from mechanical ventilation	130		

Chapter 6 Monitoring of the cardiovascular system: insertion and assessment**173***Alan T. Platt, Sarah Conolly and Jonathan Round*

Introduction	174	6.7 Insertion of a transpulmonary cardiac output monitoring device using lithium dilution (e.g. LiDCO™plus)	216
Electrocardiogram monitoring	174	6.8 Transpulmonary cardiac output monitoring - lithium dilution (e.g. LiDCOplus)	217
Definition	174	6.9 Insertion of a transpulmonary cardiac output monitoring device using thermodilution (e.g. PiCCO®)	219
Aims and indications	174	6.10 Transpulmonary cardiac output monitoring using thermodilution (e.g. PiCCO)	220
Background	174	6.11 Insertion of the oesophageal Doppler probe (e.g. CardioQ™)	222
The 12-lead ECG	177	6.12 Oesophageal Doppler monitoring (ODM) (e.g. CardioQ)	223
Continuous cardiac monitoring	177		
Applying ECG monitoring	178	Competency statements for Chapter 6	
Assessing an ECG	178	6.1 Specific procedure competency statements for the application and use of continuous ECG monitoring	224
Arterial blood pressure monitoring	180	6.2 Specific procedure competency statements for insertion and use of invasive blood pressure monitoring	225
Non-invasive arterial blood pressure monitoring	180	6.3 Specific procedure competency statements for insertion and use of central pressure monitoring	226
Definition	180	6.4 Specific procedure competency statements for insertion of a pulmonary artery catheter	227
Aims and indications	180	6.5 Specific procedure competency statements for pulmonary artery catheter monitoring	230
Background	181	6.6 Specific procedure competency statements for undertaking pulmonary artery wedge pressure – measurement	233
Invasive arterial blood pressure monitoring	181	6.7 Specific procedure competency statements for undertaking CO studies with a pulmonary artery catheter	234
Definition	181	6.8 Specific procedure competency statements for insertion of a transpulmonary cardiac output device using lithium dilution (e.g. LiDCOplus)	235
Aims and indications	181	6.9 Specific procedure competency statements for transpulmonary cardiac output monitoring using lithium dilution (e.g. LiDCOplus)	237
Background	181	6.10 Specific procedure competency statements for insertion of a transpulmonary cardiac output device using thermodilution (e.g. PiCCO)	239
Evidence and current debates	183	6.11 Specific procedure competency statements for transpulmonary cardiac output monitoring using thermodilution (e.g. PiCCO)	241
Insertion of and monitoring using an invasive blood pressure monitoring system	184	6.12 Specific procedure competency statements for insertion of an oesophageal Doppler probe (e.g. CardioQ)	243
Central venous pressure monitoring	187	6.13 Specific procedure competency statements for oesophageal Doppler monitoring (ODM) (e.g. CardioQ)	245
Definition	187		
Aims and indications	187	References	246
Background	187		
CVP trace	189		
Efficacy of CVP monitoring	189		
Insertion of and monitoring using a CVP monitoring system	189		
Safety and risk issues	190		
Advanced haemodynamic monitoring	192		
Introduction	192		
Definition	192		
Aims and indications	192		
Background	192		
Haemodynamic monitoring	193		
The measurement of cardiac output	193		
Pulmonary thermodilution method	194		
Transpulmonary dilution method	201		
Summary	205		
Procedure guidelines for Chapter 6			
6.1 Application of continuous ECG monitoring	206		
6.2 Setting up the arterial pressure monitoring system and insertion of an arterial cannula	207		
6.3 Setting up the CVP monitoring system and insertion of a central venous catheter	209		
6.4 Insertion of a pulmonary artery catheter (PAC)	211		
6.5 Pulmonary artery catheter monitoring	213		
6.6 Undertaking pulmonary artery wedge pressure measurement	215		

Chapter 7 Titration of inotropes and vasopressors 249

Kirsty Rutledge

Definition	250	7.5 Changeover of inotrope and vasopressor infusions	265
Aims and indications	250		
Background	250		
Choice of inotrope or vasopressor	251		
Components of titration of inotropic drug therapies	251	Competency statements for Chapter 7	
Administration of inotropic drugs via syringe pumps	251	7.1 Specific procedure competency statements for preparation of inotropes and vasopressors for clinical use	270
Titration of inotropic drugs to meet patient requirements	253	7.2 Specific procedure competency statements for calculating dosages for the administration of inotropes and vasopressors	271
Changeover of inotrope and vasopressor infusions	254	7.3 Specific procedure competency statements for administration of inotropic and vasopressor drugs via syringe pumps	272
Troubleshooting	255	7.4 Specific procedure competency statements for titration of inotropic and vasopressor drugs to meet patient requirements	273
		7.5 Specific procedure competency statements for changeover of inotrope and vasopressor infusions	274
Procedure guidelines for Chapter 7		<i>References and further reading</i>	275
7.1 Preparation of inotropes and vasopressors for administration via a syringe pump	259		
7.2 Calculating dosages for the administration of inotropes and vasopressors	261		
7.3 Administration of inotropic and vasopressor drugs via a syringe pump (commencing a new infusion)	262		
7.4 Titration of inotropic and vasopressor drugs up and down to meet patient requirements	264		

Chapter 8 Assessment and support of hydration and nutrition status and care 277

Kirsty Rutledge and Ian Nesbitt

Definition	278	Parenteral nutrition	295
Aims and indications	278	Complications	296
Background	278	Ethical considerations	296
The effect of critical illness on hydration and nutrition	281		
Optimizing hydration and nutrition	283	Procedure guidelines for Chapter 8	
Therapy to maintain hydration and nutrition status	283	8.1 Blood glucose monitoring	296
Maintaining fluid balance in the critically ill	283	8.2 Insertion of a nasogastric tube in a sedated and intubated patient	298
Maintaining nutrition	288	8.3 Administration of enteral feed	300
Therapy	290		
Enhanced recovery programmes	290	Competency statements for Chapter 8	
Feeding critically ill patients	291	8.1 Specific procedure competency statements for blood glucose monitoring	302
Glycaemic control	292	8.2 Specific procedure competency statements for insertion of a nasogastric tube in an intubated patient	303
Insulin titration	292	8.3 Specific procedure competency statements for administration of enteral feed	304
Problems with providing hydration and nutrition	292	<i>References and further reading</i>	305
Overfeeding	292		
Refeeding syndrome	293		
Enteral feeding access in an intubated patient	293		
Advantages of fine-bore and wide-bore enteral tubes	293		
Risks and complications of nasogastric tube insertion	294		

Chapter 9 Continuous renal replacement therapies: assessment, monitoring and care 309

Annette Richardson and Jayne Whatmore

Definition	310	Nutritional support	322
Aims and indications	310	Respiratory management	322
Anatomy and physiology of the kidney	310	Neurological care	323
Acute kidney injury	311	Monitoring and problem solving on the CRRT circuit	323
Indications for CCRT in acute kidney injury	313		
Aims of CRRT	314		
How CRRT works	314	Procedure guidelines for Chapter 9	
Principles of renal replacement therapy	314	9.1 Preparation and priming of the CRRT machine	325
Continuous versus intermittent renal replacement therapy	314	9.2 Commencement of CRRT	326
Types of CRRT	314	9.3 Managing the patient on CRRT	327
CRRT priming and treatment choices	315	9.4 Disconnection of CRRT	328
Maintaining the CRRT circuit	319		
Assessment and monitoring of the patient on CRRT	321	Competency statement for Chapter 9	
Cardiovascular status and fluid management	321	9.1 Specific procedure competency statements for CRRT	329
Intravenous access and infection control	321		
Maintaining patency of intravenous access	321	<i>References</i>	331
Monitoring electrolytes and metabolic status	322		
Hypothermia	322		

Chapter 10 Assessment and monitoring of analgesia, sedation, delirium and neuromuscular blockade levels and care 333

Phil Laws and Nicola Rudall

Pain	334	Treatment	342
Definitions	334	Drugs for sedation, analgesia and neuromuscular blockade	342
Aims and indications	334	Sedation	342
Background	334	Analgesia	345
Anatomy and physiology*	334	Opioids	345
Assessment of pain	334	Neuromuscular blockade	345
Management of pain	336	Rescue sedation	346
Sedation	336		
Definition	336	Procedure guidelines for Chapter 10	
Aims of sedation	336	10.1 Assessment of pain	346
Background	336	10.2 Sedation management: sedation holds and titration	348
Sedation hold	337	10.3 Assessing delirium	349
Withdrawal of sedation	337	10.4 Neuromuscular blockade assessment	350
Rescue sedation	338		
Assessment of sedation	338	Competency statements for Chapter 10	
Monitoring of sedated patients	338	10.1 Specific procedure competency statements for assessment of pain	351
Delirium	339	10.2 Specific procedure competency statements for sedation management: sedation holds and titration	352
Definition	339	10.3 Specific procedure competency statements for assessing delirium	353
Aims in treating patients with, or at risk of developing, delirium	339	10.4 Specific procedure competency statements for neuromuscular blockade assessment	354
Background	339		
Drugs and delirium	340	<i>References and further reading</i>	355
Assessment and monitoring of delirium	340		
Neuromuscular blockade	340		
Definition	340		
Aims and indications	340		
Anatomy and physiology	341		
Neuromuscular blockade	341		
Assessment of neuromuscular blockade	342		

Chapter 11 Assessment and monitoring of neurological status 357*Margaret A. Douglas and Sarah E.C. Platt*

Definition	358	11.3 Recalibrating (zeroing) an intracranial pressure monitor that incorporates an external ventricular drain (EVD)	376
Aims and indications	358		
Background anatomy and physiology of the central nervous system	358		
Assessment of neurological status	365	Competency statements for Chapter 11	
Clinical methods	365		
Invasive monitoring	368	11.1 Specific procedure competency statements for recording intracranial pressure from an intracranial pressure monitor that incorporates an external ventricular drain (EVD)	377
ICP monitoring devices	368	11.2 Specific procedure competency statements for recalibrating (zeroing) an intracranial pressure monitor that incorporates an external ventricular drain (EVD)	378
Aspects of care impacting on intracranial pressure	371		
Advanced neuromonitoring	372	References	379
Procedure guidelines for Chapter 11			
11.1 Neurological observations and assessment	372		
11.2 Recording intracranial pressure from an intracranial pressure monitor that incorporates an external ventricular drain (EVD)	374		

Chapter 12 Assessment and care of tissue viability, and mouth and eye hygiene needs 381*Philip Woodrow, Judy Elliott and Pauline Beldon*

Tissue viability	382	Background	400
Definition	382	Anatomy and physiology	400
Indications	382	Problems	401
Anatomy and physiology	382	Assessment and care	403
Functions of the skin	383		
Challenges to health of skin	384	Procedure guidelines for Chapter 12	
Pressure ulcers	384	12.1 Assessment of oral cavity	405
Definition	384	12.2 Care of the oral cavity	405
Indications	384	12.3 Denture hygiene	407
Background	384	12.4 Assessing the eye	408
Pressure ulcer grading	385	12.5 Cleansing the eyes	409
Extrinsic factors	386	12.6 Instillation of eye drops	410
Assessment	386		
Skin inspection	386	Competency statements for Chapter 12	
Prevention	387		
Healing pressure ulcers	390	12.1 Specific procedure competency statements for pressure ulcer prevention	411
Dressings	390	12.2 Specific procedure competency statements for assessing and managing pressure ulcers in patients who are critically ill	412
Reporting pressure ulcers	390	12.3 Specific procedure competency statements for mouth care for critically ill patients	413
Conclusion	390	12.4 Specific procedure competency statements for eye care for critically ill patients	414
Useful websites	390	References and further reading	415
Mouth care	390		
Definition	390		
Aims and indications	397		
Background	397		
Anatomy and physiology	397		
Oral pathophysiology	398		
Problems in critical illness	398		
Assessment and care of oral cavity	399		
Dentures	400		
Eye care	400		
Definition	400		
Aims and indications	400		

Chapter 13 Assessment of sleep and sleep promotion**421***Annette Richardson, Micheala Allsop and Elaine Coghill*

Definition	422	Procedure guideline for Chapter 13	
Indications	422	13.1 Sleep assessment and promotion	429
Background	422	Competency statements for Chapter 13	
The stages of sleep	422	13.1 Specific procedure competency statements for sleep assessment	430
Why is sleep important?	422	13.2 Specific procedure competency statements for sleep promotion	431
Assessment of sleep	423	References and further reading	432
Physiological sleep assessment methods	423		
Non-physiological sleep assessment methods	423		
Non-physiological sleep assessment tools	424		
Factors that disrupt and promote sleep	425		

Chapter 14 Physical mobility and exercise interventions for critically ill patients**435***D.J. McWilliams and Amanda Thomas*

Definitions	436	14.5 Log rolling a patient with suspected spinal injury to lay on their right side	452
Aims and indications	436	14.6 Positioning a patient for a chest X-ray	454
Background anatomy and physiology	436	14.7 Mechanical hoist transfer	456
Evidence and current debates	437	Competency statements for Chapter 14	
Review of components of physical mobility and exercise	437	14.1 Specific procedure competency statements for positioning a patient in high sitting	459
Assessment of readiness to mobilize	437	14.2 Specific procedure competency statements for positioning a patient in high side lying	460
Interventions	438	14.3 Specific procedure competency statements for positioning a patient in side lying	461
During the acute phases of illness	438	14.4 Specific procedure competency statements for positioning a patient with raised intracranial pressure	462
Rehabilitation for patients unable to sit on the edge of the bed (i.e. 'bed bound')	438	14.5 Specific procedure competency statements for log rolling a patient with a suspected spinal injury	463
Rehabilitation for patients deemed ready to sit on the edge of the bed	442	14.6 Specific procedure competency statements for positioning a patient for a chest X-ray	464
Post-critical care rehabilitation	444	14.7 Specific procedure competency statements for completing a hoist transfer	465
Measurement of manual handling risk	444	References and further reading	466
Procedure guidelines for Chapter 14			
14.1 Positioning a patient in high sitting	447		
14.2 Positioning a patient in high side lying	448		
14.3 Positioning a patient in side lying	450		
14.4 Positioning a patient with raised intracranial pressure (30° tilt)	451		

Chapter 15 Transfer of the critically ill patient**469***Andrew Baker and Simon M. Whiteley*

Definitions	470	The effects of altitude: potential for hypoxia	471
Aims	470	The effects of altitude: expansion of air spaces	473
Indications	470	Physiological stress response	473
Background	470	Temperature control	473
Physiological effects of transfer	470	Evidence and current debates	473
Cardiovascular system	470	Quality of patient transfers	473
Effect of movement/gravitational forces	471	Organization	474
Respiratory system	471		

Role of critical care networks	474	15.4 Preparation for transfer	482
Specialist transfer teams	474	15.5 Carrying out safe transfer	483
Timing of transfers	474	15.6 Handover	484
Components of the transfer process	474		
The decision to transfer	475		
Communication	475	Competency statements for Chapter 15	
Assessment and stabilization prior to transfer	475	15.1 Specific procedure competency statements for decision making in relation to transfer	484
Selection of transport mode	475	15.2 Specific procedure competency statements for communication in relation to transfer	485
Preparation for transfer	476	15.3 Specific procedure competency statements for assessment and stabilization prior to transfer	485
Safe transfer	476	15.4 Specific procedure competency statements for preparation for transfer	486
Handover	478	15.5 Specific procedure competency statements for carrying out safe transfer	486
Competency statements	478	15.6 Specific procedure competency statements for handover following patient transfer	487
Guidelines for transfer	478		
Equipment	478	<i>References and further reading</i>	488
Procedure guidelines for Chapter 15			
15.1 Decision to transfer	479		
15.2 Communication	479		
15.3 Assessment and stabilization prior to transfer	480		

Chapter 16 Rehabilitation from critical illness

489

Catherine I. Plowright and Christina Jones

Definition	490	Procedure guideline for Chapter 16	
Aims and indications for rehabilitation	490	16.1 Rehabilitation during and following critical illness	494
Background	490		
Rehabilitation and critical care	490	Competency statement for Chapter 16	
Effect of critical illness on patients' families	490	16.1 Specific procedure competency statements for rehabilitation of critically ill patients	495
Review of components of rehabilitation from critical care	491		
Muscle loss and weakness	491	<i>References</i>	497
Cognitive deficits	491	<i>Useful websites</i>	498
Rehabilitation	492		
Rehabilitation interventions	492		
Diaries	493		
Counselling	493		
Summary	493		

Chapter 17 Withdrawal of treatment and end of life care for the critically ill patient

499

Natalie A. Pattison

Definition	500	Avoiding prolongation of dying and decisions about transfer	504
Aims and indications	500	Care around withdrawal: care in the last days and hours	505
Background	500	Diagnosing dying	505
Pre-EOLC considerations: at the beginning	501	Consultation and communication of decision to withdraw treatment with patient, next of kin and significant others	506
Prognosis	501	Patients	506
Post prognosis: EOLC in critical care environments	502	Families/Next of kin/Significant others	506
Tools that facilitate best care at EOL	502	Nurses and allied health professionals	507
Guidance for EOLC	502	Communication and breaking bad news: supporting the family	507
Assessment of need for 'Do Not Attempt Cardiopulmonary Resuscitation' orders	503		
Process for obtaining a DNACPR order	503		
Assessment of need for discussion of withdrawal of treatment	504		

Cultural issues	508	Competencies	512
Review of practical components of withdrawal of treatment and end of life care	508	Conclusion	512
When to withdraw	508	Procedure guidelines for Chapter 17	
How and when to withdraw treatment	508	17.1 Communication strategies at end of life	513
Extubation	508	17.2 Considerations concerning withdrawal of treatment	514
Care of the dying patient during extubation	509	17.3 Extubation care at end of life	516
Further EOLC considerations in the last days and hours	509	17.4 Considerations for end of life care for patients in critical care units	517
Sudden or unexpected dying	509	17.5 Summary of procedures after death	520
Brainstem function measurement and death	509	Competency statement for Chapter 17	
Brainstem death	510	17.1 Specific procedure competency statements for end of life care	522
After-death care	510	References and further reading	523
Communicating procedures around death	510	Useful websites	529
Preparing the body of the patient who has died	511		
Considerations before showing families the deceased patient (either before or after last offices)	511		
Families' time with patient in unit after the patient's death	511		
Bereavement care	511		

Chapter 18 Cardiopulmonary resuscitation

531

Jackie S. Younker and Jasmeet Soar

Definition	532	Identifying reversible causes	541
Aims and indications	532	Post-cardiac arrest care	541
Background	532	Diagnosing death	541
Anatomy and physiology	532	Procedure guideline for Chapter 18	
Incidence and causes of cardiac arrest	534	18.1 Resuscitation	543
Evidence for guidelines	534	Competency statements for Chapter 18	
In-hospital resuscitation	534	18.1 Specific procedure competency statements for recognition of cardiac arrest and starting CPR	548
Location	535	18.2 Specific procedure competency statements for defibrillation – AED	549
Skills of the staff who respond to the cardiac arrest	535	18.3 Specific procedure competency statements for defibrillation – manual	549
Number of responders	535	18.4 Specific procedure competency statements for airway assessment and ventilation	550
Equipment and medicines available	535	References	550
Resuscitation team	535	Useful websites	552
