Knowing Versus Doing: Education and Training Needs of Staff in a Chronic Care Hospital Unit for Individuals With Dementia

Although a survey of staff on a chronic care hospital unit revealed a high level of disease knowledge, staff indicated a need for more information and skills for managing behaviors nonpharmacologically.

Delusions and Underlying Needs in Older Adults With Alzheimer's Disease: Influence of Earlier Life Experiences and the Current Environment

The content of delusions in individuals with Alzheimer's disease is closely related to negative events from the past, and the care recipient's current environmental conditions also influence the occurrence, frequency, and severity of delusions.
